Brochure on the Danish Energy Model

The Danish energy model has proven successful in cost-efficiently moving Denmark towards a low-carbon economy. Denmark has a clear and determined energy policy. Ambitious goals are set and reached through long-term holistic planning by an array of integrated tools including innovation and system development, energy efficiency measures and integration of renewable energy. We have drafted a brochure to showcase our results and introduce our methods.

Please find the publication [here](#)

The Danish energy model is the basis for our bilateral cooperation. Please find updated material on our bilateral cooperation programmes below:

The Danish Energy Agency is responsible for tasks linked to energy production, supply and consumption, as well as Danish efforts to reduce carbon emissions. The Agency is also responsible for supporting the economical optimisation of utilities that in addition to energy includes water, waste and telecommunication.

We are also responsible for user conditions, supply obligation and telecommunication statistics, as well as water supply and waste management.

The Danish Energy Agency was established in 1976, and is an agency under the Ministry of Climate, Energy and Utilities.
